

KT FRONTLINE

www.kepner-tregoe.com

Most companies base their approach to troubleshooting on knowledge and historical experience. Increased complexity of products and services and faster innovation cycles make knowledge and experience less valuable.

Digital Transformation is the new reality.

We do not have years or even months to learn systems anymore.

KT Frontline is the answer.

This is state-of-the-art experiential learning.

- *Modern troubleshooting depends on the ability to collaborate, communicate and document.*
- *KT Frontline provides companies with techniques for excellent performance in teamwork, shift-changes and documentation.*

This program can be deployed to a handful or to hundreds of people in just a few weeks.

What makes Problem Solving Simulation unique?

Gamification – young operators and engineers learn 10 times more and 100 times faster when it feels like a game where they can practice and win.

Airline pilots do not learn to fly airplanes by reading books – they practice in simulators.

Learning by doing – troubleshooting just like it happens in a factory.

No theory – the opposite of classroom training, This is realistic simulation.

Detailed and instant feedback for the team – every round improves performance.

Immediate Application – new skills are applied immediately after training.
